Team: Not Accepted

First Tweet: Attention grabbing introduction to project with visual of loans/finances

Background: Explain the goal of our project, the solution we're proposing, and our approach to solving the problem. We want this to be a brief intro into our "why".

- Inefficient and biased manual evaluation
- Need for accurate and transparent decision-making
- Advanced predictive model for loan application evaluation
- Neural networks for accept/reject decisions
- Rule-based expert systems (RBES) for interest rate calculation

Execution: Describe our solution, how we built it and how it works. Include a few visuals of running the code or development.

- Image showing/describing inputs to Neural Network
- Describe training model
- Link to outside resources
- Describe dystopian possibilities

Analysis/Closing: Sum up our goals and intended use of this project. Tie back to initial goals & consider expansions.

- Include data visualization techniques for better communication of results
- Potential businesses/organizations to adopt solution
